Experience

Nokia

Apr - Oct '25

Student Developer, Product Security (Gen AI)

Bengaluru, India

- Collaborated with a 4-member CSE-Cybersecurity team and Nokia mentors to design an industry-oriented product security solution for containerized workloads.
- Translated high-level security requirements into a practical DevSecOps workflow, integrating scanning, automated remediation and reporting for Docker and Kubernetes environments.
- Presented the solution at Nokia Open Day 2025 and contributed to a research paper that helped the project earn the “Best Implemented Industry Project” award.

Projects

Smart campus simulation | Raspberry pi, Sensors, Frontend, Python, Ngrok

Feb '25 - Current

- This project allows users to remotely control multiple smart devices (lights and fans) through a web interface, integrating Flask with Raspberry Pi's GPIO for real-time device management.
- The system includes a login-based authentication mechanism, ensuring that only authorized users can control the devices, enhancing security and preventing unauthorized access.
- The system is accessible both within the local network (LAN) and remotely via Ngrok, enabling control of smart devices from anywhere with an internet connection.

IEEE RNSIT CompSoc Website | React, Netlify, Full-Stack Development

Sep '25

- Developed the IEEE CompSoc RNSIT website using the **React framework**.
- Deployed the website online using **Netlify** for easy accessibility.
- Implemented sections to showcase upcoming and past events of the society.
- Added a dedicated team page including the **HoD, Faculty Coordinator**, and all members.
- Worked as the **Full-Stack Developer**, handling frontend, backend, and deployment.

NBUC - Enhancing product security | Python, Docker, Kubernetes, Gen AI, DevSecOps

Apr - Oct '25

- Engineered an end-to-end Python pipeline to scan Docker images and Kubernetes manifests and automatically generate remediated Dockerfiles and YAMLS using Trivy, Kubescape and kube-score.
- Integrated a Gen AI service (LLM via API) with SBOM and scan outputs to synthesize concrete fixes and developer-friendly security reports.
- Built a Flask + HTML/CSS frontend with dedicated modules for image security, pod security and an interactive security chatbot.
- Reduced critical vulnerabilities by roughly 60% across real workloads and delivered the system as an award-winning Nokia Open Day project.

Technical Skills

Languages: Python, C, Java, C++, JavaScript, HTML, CSS, Bash

Tools/Frameworks: React.js, SQL, REST API calls, Git version control, AWS fundamentals

Education

RNSIT

Sep 2023 - Aug 2027

CSE - Cybersecurity

CGPA : 8.87

Extracurricular Activities

Dept of CSE-Cybersecurity

Jan '24 - July '25

- Class representative for the 2nd academic year

IEEE Computer Society

Sep '25 - Current

- Treasurer for IEEE Computer Society, RNS Institute of Technology.

Nex-sus Department Club

May '24 - Current

- Full-time member of the Department Club **Nex-sus**, actively contributing to events and initiatives.

Achievements

- Best implemented industry project, Nokia open day-OCT 2025
